Biological Description

Description	Riluzole (RP-54274) is a glutamate antagonist (RECEPTORS, GLUTAMATE) used as an anticonvulsant (ANTICONVULSANTS) and to prolong the survival of patients with AMYOTROPHIC LATERAL SCLEROSIS.
Targets(IC50)	GABA Receptor,NMDAR,Sodium Channel
In vitro	Riluzole readily crosses the blood-brain barrier. Treatment of rodents with transient cerebral ischemia with 8 mg/kg i.p. Riluzole completely inhibited the massive release of glutamic acid induced by local ischemia.
In vivo	Riluzole readily crosses the blood-brain barrier. Treatment of rodents with transient cerebral ischemia with 8 mg/kg i.p. Riluzole completely inhibited the massive release of glutamic acid induced by local ischemia.
