Biological Description

Description	Sulfadoxine (Sulphadoxine) is a broad-spectrum sulfanilamide and a synthetic analog of para-aminobenzoic acid (PABA) with bacteriostatic and antimalarial properties.
Targets(IC50)	HIV Protease,Antibiotic,Parasite,Autophagy,DHFR
Kinase Assay	Competitive binding assays: Cells are harvested from 150-sq cm T-flasks, and cytosol is prepared at a protein concentration of approximately 2 mg/mL in phosphate buffer. Aliquots of this 180,000 ×g supernatant are then incubated with various concentrations of Tamoxifen and 2.5 nM [³ H]estradiol for 16 hr at 0-4 °C. The free steroids are absorbed by dextran-charcoal [10 µL of 0.5% Dextran C-5% Norite A in TE buffer] for 1 hr at 0 °C, and aliquots are counted after centrifugation at 800 ×g, 30 min. The relative binding ability of each competitor is taken as the ratio of the concentration of radioinert estradiol/competitor required to inhibit one-half of the specific [³ H]estradiol binding, with the affinity of estradiol set at 100%.
