

5-R-Rivaroxaban

Chemical Properties

CAS No. :	865479-71-6
Formula:	C ₁₉ H ₁₈ ClN ₃ O ₅ S
Molecular Weight:	435.88
Appearance:	no data available
Storage:	Powder: -20°C for 3 years In solvent: -80°C for 1 year

Biological Description

Description	5-R-Rivaroxaban is the (R)-enantiomer of Rivaroxaban. Rivaroxaban (BAY 59-7939) is a highly potent and selective direct Factor Xa (FXa) inhibitor with an IC ₅₀ of 0.7 nM and a K _i of 0.4 nM.
Targets(IC ₅₀)	Factor Xa
In vitro	Rivaroxaban competitively inhibits human FXa (K _i 0.4 nM) with >10 000-fold greater selectivity than for other serine proteases; it also inhibits prothrombinase activity (IC ₅₀ 2.1 nM). Rivaroxaban inhibits endogenous FXa more potently in human and rabbit plasma (IC ₅₀ 21 nM) than rat plasma (IC ₅₀ 290 nM). It demonstrates anticoagulant effects in human plasma, doubling prothrombin time (PT) and activates partial thromboplastin time at 0.23 and 0.69 μM, respectively [2].
In vivo	Rivaroxaban, administered by i.v. bolus before thrombus induction, reduces thrombus formation (ED ₅₀ 0.1 mg/kg), inhibits FXa, and prolongs PT dose-dependently. PT and FXa are affected slightly at the ED ₅₀ (1.8-fold increase and 32% inhibition, respectively). At 0.3 mg/kg (dose leading to almost complete inhibition of thrombus formation), Rivaroxaban moderately prolongs PT (3.2±0.5-fold) and inhibits FXa activity (65±3%) [2].

Solubility Information

Solubility	DMSO: 33.33 mg/mL (76.47 mM), Sonication is recommended. (< 1 mg/ml refers to the product slightly soluble or insoluble)
