Biological Description

Description	Benzobicyclon is a 4-hydroxyphenylpyruvate dioxygenase (4-HPPD) inhibitor and herbicide that is spectrally active against annual grasses, sedges, and broadleaf weeds without toxicity to rice.
Targets(IC50)	Others
In vitro	Under greenhouse paddy conditions, the herbicidal activity of Benzobicyclon (200–300 g a.i./ha, 6% flowable) was evaluated in pot tests. Applied at pre-emergence and 1-leaf stage, Benzobicyclon effectively controlled Echinochloa crus-galli, Scirpus juncoides, Monochoria vaginalis, Lindernia dubia var. dubia, and Cyperus serotinus, with no phytotoxicity to transplanted rice. Less effective against Sagittaria pygmaea (requiring 600 g/ha)[1].
