Biological Description

Description	N-desmethyl Enzalutamide (N-desmethyl MDV 3100) is the active Enzalutamide metabolite. It is the active metabolite of Enzalutamide. N-desmethyl Enzalutamide demonstrates primary and secondary pharmacodynamics of similar potency to Enzalutamide and circulates at approximately the same plasma concentrations as enzalutamide.
Targets(IC50)	Androgen Receptor
In vivo	N-desmethyl Enzalutamide, an active metabolite contributing to the clinical effects of Enzalutamide, circulates at similar plasma concentrations to Enzalutamide. The pharmacologically inactive carboxylic acid metabolite circulates at approximately 25% lower plasma concentrations than Enzalutamide [1].
