

## Entacapone

## Chemical Properties

CAS No. :	130929-57-6
Formula:	C <sub>14</sub> H <sub>15</sub> N <sub>3</sub> O <sub>5</sub>
Molecular Weight:	305.29
Appearance:	no data available
Storage:	Powder: -20°C for 3 years   In solvent: -80°C for 1 year

## Biological Description

Description	Entacapone is a potent and specific peripheral catechol-O-methyltransferase (COMT) inhibitor with an IC <sub>50</sub> of 151 nM. Entacapone is also a potential obesity-related gene (FTO) inhibitor that can inhibit FTO demethylation activity and be used in the study of metabolic diseases.
Targets(IC <sub>50</sub> )	Transferase
In vivo	In various tissues, such as the liver, duodenum, kidney, and lung, Entacapone inhibits the activity of catechol-O-methyltransferase (COMT). Additionally, in PC12 cells, Entacapone can suppress extracellular cytotoxicity induced by the aggregation of $\alpha$ -syn and $\beta$ -amyloid (A $\beta$ ).

## Solubility Information

Solubility	DMSO: 50 mg/mL (163.78 mM), Sonication is recommended. Ethanol: 2 mg/mL (6.55 mM), Sonication is recommended. ( $< 1$ mg/ml refers to the product slightly soluble or insoluble)
------------	--

## Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	3.2756 mL	16.3779 mL	32.7557 mL
5 mM	0.6551 mL	3.2756 mL	6.5511 mL
10 mM	0.3276 mL	1.6378 mL	3.2756 mL
50 mM	0.0655 mL	0.3276 mL	0.6551 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.
