

Droxidopa

Chemical Properties

CAS No. :	23651-95-8
Formula:	C ₉ H ₁₁ NO ₅
Molecular Weight:	213.19
Appearance:	no data available
Storage:	Powder: -20°C for 3 years In solvent: -80°C for 1 year

Biological Description

Description	Droxidopa (L-DOPS) is an orally available prodrug of norepinephrine that is used in the treatment of symptomatic orthostatic hypotension due to neurogenic causes of autonomic failure.
Targets(IC ₅₀)	Adrenergic Receptor
In vivo	Droxidopa is administered orally and is absorbed and converted to norepinephrine by the enzyme dopa decarboxylase, which, together with endogenous norepinephrine, increases neurotransmitter levels. Droxidopa also crosses the blood-brain barrier (BBB) and is converted to norepinephrine and epinephrine in the brain.

Solubility Information

Solubility	DMSO: 2.13 mg/ml (10 mM), Sonication is recommended. H ₂ O: 1.25 mM, Sonication is recommended. (< 1 mg/ml refers to the product slightly soluble or insoluble)

Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	4.6907 mL	23.4533 mL	46.9065 mL
5 mM	0.9381 mL	4.6907 mL	9.3813 mL
10 mM	0.4691 mL	2.3453 mL	4.6907 mL
50 mM	0.0938 mL	0.4691 mL	0.9381 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.
