

## Sapitinib

## Chemical Properties

CAS No. :	848942-61-0
Formula:	C <sub>23</sub> H <sub>25</sub> ClFN <sub>5</sub> O <sub>3</sub>
Molecular Weight:	473.93
Appearance:	no data available
Storage:	Powder: -20°C for 3 years   In solvent: -80°C for 1 year

## Biological Description

Description	Sapitinib (AZD-8931) , a reversible, ATP competitive inhibitor of EGFR(IC <sub>50</sub> =4 nM), ErbB2 (IC <sub>50</sub> =3 nM) and ErbB3(IC <sub>50</sub> =4 nM), is more effective over Gefitinib or Lapatinib against NSCLC cell, 100-fold more specific for the ErbB family over MNK1 and Flt.
Targets(IC <sub>50</sub> )	EGFR
In vitro	Sapitinib shows different potency to NSCLC and SCCHN cell lines. Sapitinib has high sensitivity to PC-9 cells (EGFR activating mutation) with GI <sub>50</sub> of 0.1 nM and low activity to NCI-1437 cells with GI <sub>50</sub> above 10 μM. Sapitinib exhibits more potency against phospho-EGFR, phospho-erbB2 and phospho-erbB3 than either lapatinib or gefitinib in PE/CA-PJ41, PE/CA-PJ49, DOK and FaDu cells. [1]
In vivo	Sapitinib reveals antitumor activity in BT474c, Calu-3, LoVo, FaDu and PC-9 xenografts. Sapitinib could reduce p-Akt, Ki67 expression and p-ERK in BT474c xenografts following acute treatment. Sapitinib also causes induction of the M30 apoptosis marker. Furthermore, Sapitinib shows greater proapoptotic effect compared with gefitinib and lapatinib in LoVo xenografts. [1]
Kinase Assay	Isolated kinase assays: The intracellular kinase domains of human EGFR and erbB2 are cloned and expressed in the baculovirus/Sf21 system. The inhibitory activity of AZD8931 is determined with ATP at Km concentrations (0.4 mM for erbB2 and 2 mM for EGFR) using the ELISA method.
Cell Research	To determine the antiproliferative activity against cell lines grown in vitro, AZD8931 is tested in a panel of NSCLC and SCCHN cell lines. Cells are incubated for 96 hours with AZD8931 (0.001-10 μM). Viable cell number is determined by 4 hours of incubation with MTS Colorimetric Assay reagent and absorbance measured at 490 nm on a spectrophotometer. (Only for Reference)

## Solubility Information

Solubility	Ethanol: < 1 mg/mL (insoluble or slightly soluble), H <sub>2</sub> O: < 1 mg/mL (insoluble or slightly soluble), DMSO: 38 mg/mL (80.18 mM),Sonication is recommended. (< 1 mg/ml refers to the product slightly soluble or insoluble)

## A DRUG SCREENING EXPERT

### Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	2.110 mL	10.5501 mL	21.1002 mL
5 mM	0.422 mL	2.110 mL	4.220 mL
10 mM	0.211 mL	1.055 mL	2.110 mL
50 mM	0.0422 mL	0.211 mL	0.422 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.
