## Biological Description

Description	Isosorbide (Devicoran) is a heterocyclic compound that is derived from glucose, used as a diuretic.
Targets(IC50)	Others
In vitro	Isosorbide increases urine volume by increasing the amount of osmotically active solute in the urine. Osmotic diuretics also increase the osmolarity of plasma. Isosorbide is used to prevent or treat chest pain (angina). It works by relaxing the blood vessels to the heart, so the blood and oxygen supply to the heart is increased. [1]
