

PF-3758309

Chemical Properties

CAS No. : 898044-15-0

Formula: C₂₅H₃₀N₈O₅

Molecular Weight: 490.62

Appearance: no data available

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Biological Description

Description	PF-3758309 (PF-03758309) (IC ₅₀ =1.3 nM), a pyrrolopyrazole inhibitor of PAK4, has effective ATP-competition.
Targets(IC ₅₀)	Apoptosis,PAK
In vitro	PF-3758309 (K _d = 2.7 nM), an effective inhibitor of PAK4 (K _i =18.7 nM) , has ATP competition. PF-3758309 (IC ₅₀ = 1.3 nM) inhibits phosphorylation of the PAK4 substrate GEF-H1 in cells. In the tumor cell, PF-3758309(IC ₅₀ = 4.7 nM) grows in a linesanchorage-independent manner. In HCT116 cells, PF-3758309 inhibits endogenous pGEF-H1 accumulation. In A549 cells, PF-3758309 effectively inhibits cellular proliferation in IC ₅₀ of 20 nM and anchorage-independent growth in IC ₅₀ of 27 nM.
In vivo	In the HCT116 tumor model, PF-3758309 act as an antiproliferative inducing apoptosis. In the sensitive model, PF-3758309 (EC ₅₀ =0.4 nM) blocks the growth of multiple human tumor xenografts.
Kinase Assay	In phospho-GEF-H1 cellular assay, TR-293-KDG cells are incubated for 3 hours with PF-3758309. TR-293-KDG cells were captured on an anti-HA antibody-coated plate, which is detected with an anti-phospho-S810-GEF-H1 antibody, and quantified with a horseradish peroxidase-goat anti-rabbit antibody conjugate. TR-293-KDG cells are constructed from HEK293 cells, which is transfected with tetracycline-inducible PAK4-kinase domain (amino acids 291-591) and expressed HA-tagged GEFH1ΔDH (amino acids 210-921).
Cell Research	HEK293T, HCT116, and SKOV3 cells are plated on 384-well plates for 24 hours culture. PF-3758309(~1 μM) is added to the cell culture incubating 72 hours. After drug treatment,cell proliferation and other indicators of metabolism are measured.
Animal Research	Nude mice with Xenograft tumors were orally fed with PF-3758309 (7.5-30 mg/kg BID) dissolved in 0.5% methylcellulose.

Solubility Information

Solubility	DMSO: 91 mg/mL (185.48 mM),Sonication is recommended. Ethanol: 91 mg/mL (185.48 mM),Sonication is recommended. H ₂ O: < 1 mg/mL (insoluble or slightly soluble), (< 1 mg/ml refers to the product slightly soluble or insoluble)
