Biological Description

Description	1. Farrerol has antioxidative activity. 2. Farrerol modulates TAP and BNBD5 gene expression in mammary gland, enhances bMEC defense against <i>S. aureus</i> infection and could be useful in protection against bovine mastitis. 3. Farrerol inactivates KEAP-1 or activates the Akt, p38 and ERK to facilitate the release of Nrf2 from Keap1 and subsequent reduces the intracellular production of reactive oxygen species via the induction of HO-1 expression. 4. Farrerol has protective effects against H ₂ O ₂ -induced apoptosis in EA.hy926 cells, and suggests that Farrerol is a potential candidate for the intervention of endothelial-injury-associated cardiovascular diseases.
Targets(IC50)	ERK, Akt, p38 MAPK
