

Cathelicidin-2 (128-153) (chicken) TFA

Chemical Properties

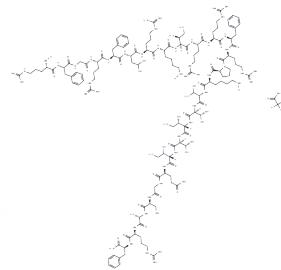

CAS No. :

Formula: C147H245N51O30.XCF3COOH

Molecular Weight: 3206.90

Appearance:

Storage: keep away from moisture
Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Biological Description

Description	Cathelicidin-2 (CATH-2) (128-153) is a synthetic antimicrobial peptide derived from amino acids 128-153 of chicken CATH-2, demonstrating activity against pathogens such as <i>E. coli</i> , <i>S. aureus</i> , <i>S. enteritidis</i> , and <i>B. globigii</i> in a dose-dependent manner. At a concentration of 40 µM, it induces hemolysis in chicken erythrocytes without exhibiting cytotoxicity towards human peripheral blood mononuclear cells (PBMCs). Additionally, it stimulates the production of the chemokine CCL2 and suppresses LPS-induced secretion of TNF-α, IL-6, IL-8, and IL-10 in human PBMCs.
