Data Sheet (Cat.No.TMPJ-00333)

TGFBR2 Protein, Mouse, Recombinant (aa 24-184, hFc)

General Information

Transforming growth factor-β receptor type II;TbetaR-II;TGF-β type II receptor;TβR-II;TGFR-2;

Synonyms: TGF-beta receptor type II;Transforming growth factor-beta receptor type II;TGF-beta type II

receptor;TGF-β receptor type II;Tgfbr2;TGF-beta receptor type-2;TGF-β receptor type-2

Protein Construction: Ile24-Asp184

Species: Mouse

Expression Host: HEK293 Cells

Accession: Q62312

Molecular Weight: 60-75 KDa (reducing condition)

AA Sequence: Ile24-Asp184

QC Testing

Biological Activity:

Activity has not been tested. It is theoretically active, but we cannot guarantee it. If you

require protein activity, we recommend choosing the eukaryotic expression version first.

Purity: Greater than 95% as determined by reducing SDS-PAGE. (QC verified)

Endotoxin: $< 0.1 \text{ ng/}\mu\text{g} (1 \text{ EU/}\mu\text{g}) \text{ as determined by LAL test.}$

Formulation: Lyophilized from a solution filtered through a 0.22 µm filter, containing PBS, pH 7.4.

Preparation and Storage

Reconstitution:

Reconstitute the lyophilized protein in distilled water. The product concentration should not be less than 100 μ g/ml. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.

Stability & Storage:

Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Shipping:

In general, Lyophilized powders are shipping with blue ice. Solutions are shipping with dry ice.

Protein Background

Transforming growth factor- β (TGF- β) is an essential regulator in the processes of development, cell proliferation, and extracellular matrix deposition. TGF- β regulates cellular processes by binding to three high-affinity cell surface receptors: TGF- β receptor type I (TGF- β -RII), TGF- β receptor type II (TGF- β -RIII), and TGF- $\beta\beta$ receptor type III (TGF- β -RIII). TGF- β RII is consists of a C-terminal protein kinase domain and an N-terminal ectodomain and

Page 1 of 2 www.targetmol.com

belongs to transforming growth factor-beta (TGF- β) receptor subfamily. TGF- β RII has a protein kinase domain which can form a heterodimeric complex with another receptor protein and bind TGF-beta. This receptor/ligand complex phosphorylates protein will enter the nucleus and regulate the transcription of a subset of genes related to cell proliferation.
