

SEZ6 Protein, Cynomolgus, Recombinant (His)

General Information

Synonyms:	SEZ-6;BSRPC;BSRP-C;SEZ6
Protein Construction:	Leu20-His927
Species:	Cynomolgus
Expression Host:	HEK293 Cells
Accession:	A0A2K5WPJ4
Molecular Weight:	99.11 kDa (predicted). Due to glycosylation, the protein migrates to 150-180 kDa based on Tris-Bis PAGE result.

QC Testing

Biological Activity:	Immobilized Cynomolgus SEZ6, His Tag at 2µg/ml (100µl/Well) on the plate. Dose response curve for Anti-SEZ6 Antibody, hFc Tag with the EC50 of 6.0ng/ml determined by ELISA.
Purity:	> 95% as determined by Tris-Bis PAGE; > 95% as determined by HPLC
Endotoxin:	< 1 EU/µg by the LAL method.
Formulation:	Lyophilized from a solution filtered through a 0.22 µm filter, containing PBS (pH 7.4). Typically, 8% trehalose is incorporated as a protective agent before lyophilization.

Preparation and Storage

Reconstitution:

Reconstitute the lyophilized protein in distilled water. The product concentration should not be less than 100 µg/ml. Before opening, centrifuge the tube to collect powder at the bottom. After adding the reconstitution buffer, avoid vortexing or pipetting for mixing.

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freeze-thaw cycles and store products in aliquots.

Shipping:

In general, Lyophilized powders are shipping with blue ice.

Protein Background

Seizure-related protein 6 (Sez6) contributes to chronic pain development as sez6 knockout mice show attenuated pain behaviours after peripheral nerve injury, compared with control mice. The type I transmembrane isoform of Sez6 is cleaved by the β -amyloid precursor protein cleavage enzyme 1 (BACE1), resulting in Sez6 extracellular domain shedding from the neuron surface.

Reference

Roitman M, et al. Sez6 levels are elevated in cerebrospinal fluid of patients with inflammatory pain-associated conditions. Pain Rep. 2019 Mar 25;4(2):e719. doi: 10.1097/PR9.0000000000000719. PMID: 31041421; PMCID: PMC6455686.
