Data Sheet (Cat.No.TMPY-02128)

Serpin B1 Protein, Human, Recombinant (His)

General Information

Synonyms: HEL57;serpin peptidase inhibitor, clade B (ovalbumin), member 1;MNEI;HEL-S-27;PI2;PI-2;EI;

LEI;M/NEI;ELANH2

Protein Construction: A DNA sequence encoding the human SERPINB1 (P30740) (Met 1-Pro 379) was fused with a

polyhistidine tag at the C-terminus. Predicted N terminal: Met 1

Species: Human

Expression Host: Baculovirus Insect Cells

Accession: P30740

Molecular Weight: 44 kDa (predicted); 44 kDa (reducing conditions)

QC Testing

Biological Activity:

Activity testing is in progress. It is theoretically active, but we cannot guarantee it. If you

require protein activity, we recommend choosing the eukaryotic expression version first.

Purity: > 90 % as determined by SDS-PAGE

Endotoxin: $< 1.0 \text{ EU/}\mu\text{g}$ of the protein as determined by the LAL method.

Lyophilized from a solution filtered through a 0.22 µm filter, containing 20 mM Tris, 500 mM

Formulation: NaCl, pH 8.0, 10% gly. Typically, a mixture containing 5% to 8% trehalose, mannitol, and

0.01% Tween 80 is incorporated as a protective agent before lyophilization.

Preparation and Storage

Reconstitution:

A Certificate of Analysis (CoA) containing reconstitution instructions is included with the products. Please refer to the CoA for detailed information.

Stability & Storage:

It is recommended to store recombinant proteins at -20°C to -80°C for future use. Lyophilized powders can be stably stored for over 12 months, while liquid products can be stored for 6-12 months at -80°C. For reconstituted protein solutions, the solution can be stored at -20°C to -80°C for at least 3 months. Please avoid multiple freezethaw cycles and store products in aliquots.

Shipping:

In general, Lyophilized powders are shipping with blue ice.

Protein Background

SerpinB1 is an endogenous inhibitor of serine proteases recognized for its anti-inflammatory and host-protective properties. Serum SerpinB1 levels are elevated in patients with type 2 diabetes compared with that in healthy subjects and are negatively correlated with serum LDL-C. serpinB1 as an endogenous protein that can potentially be harnessed to enhance functional beta cell mass in patients with diabetes.
